This ensures that your ports will remain open even after your device reboots. Your router has a web interface, so you will login to it using your web browser. This can be either Chrome, Firefox, Internet Explorer, or Edge. It usually does not matter which browser you choose to use. It should look something like this Your routers IP address can also be refered to as your computers default gateway. If all goes well you will see the following screen Heres how you do it. Starting from the first page in your router In this new menu, click Virtual Server. The name is only used as a reminder and has no effect on the port forward. If you are forwarding a range of ports, usually separated by a hyphen, then you need to enter the lowest number of that range into the Port Start, Port Map box and then enter highest number into the Port End box. In this new menu, click System. Our Open Port Check tool is the only online port checking tool with Guaranteed Results. Please see image below Step 2 Press and hold the reset button until theSTATUS LED turns off. Step 3 Release the reset button and wait for 1minute. You will then need toaccess the device using its default IP address of192.168.1.1 and reconfigure it for InternetAccess. Click here for more FAQs or go to Support.
